Status: Draft v0.1 (2026-10-25). Waiting on Steve's edits before step 1 starts.

1 Goal

Take the SBA fraud work done with Rosemary and turn it into a repeatable playbook. Apply it first to the agencies in the federal fraud initiative (america.gov/fraud), then use those pilots to make the case for a government-wide program.

2 Starting assumptions (please correct)

- **Starting agencies.** We could not read america.gov/fraud directly because the site blocks automated access. This list comes from public coverage of the March 2026 anti-fraud task force executive order and DOJ's National Fraud Detection Center. It needs to be checked against the site.
  - Agencies named under the task force: DOJ, Treasury, HHS, Education, HUD, Labor, DHS, SBA and OMB, plus the Inspectors General.
  - Inspector General offices in the Detection Center: USDA, Education, HHS, DHS, HUD, Interior, Labor, VA, DoD (DCIS), TIGTA, SBA and SSA.
- **Data.** We start with public data: USAspending, SAM.gov, FPDS, PRAC data, OIG/GAO reports and DOJ press releases. Agencies would provide internal data only after a pilot is approved.
- **Audience.** Proposals go to agency leadership, such as deputy secretaries, CFOs and chief data officers, and their Inspectors General. They also go to the task force or OMB as the cross-agency sponsor.
- **What the SBA work produced.** Not yet in this repo. Step 1 depends on getting those materials.

3 Plan

3.1 Step 1: Turn the SBA work into a reusable playbook

Write down what the SBA effort does. That covers its data sources, fraud typologies (for example identity theft, shell entities, duplicate or stacked awards, and ineligible recipients), detection methods, outputs and measured results. Then separate the parts that carry over to other agencies from the parts that only fit SBA.

Deliverable: `docs/playbook/sba-baseline.md` and a one-page summary of the method.

3.2 Step 2: Profile the initiative agencies and rank them

For each agency, note its largest programs and how much money they pay out. Also note its known fraud and improper-payment exposure, using PaymentAccuracy.gov and OIG/GAO findings. Record which public data exists for it and how closely it matches the SBA playbook. Rank the

agencies by impact and feasibility, and choose 2 or 3 for the first wave.

Deliverable: `docs/agencies/landscape.md`, with one short profile per agency and a ranking matrix.

3.3 Step 3: Prototype against public data for the first-wave agencies

Apply the SBA detection patterns to public data for the chosen agencies. Build wireframes for the analyst and leadership views. The goal is a convincing demo built from real public data, not a production system.

Deliverable: code under `prototypes/<agency>/` and wireframes under `docs/wireframes/`.

3.4 Step 4: Write proposals for agency leadership

Write one proposal per first-wave agency. Each covers the problem and estimated dollar exposure, what the prototype found, the pilot scope and data request, timeline, cost, success metrics and governance. Add a cross-agency proposal that presents the shared platform as the route to government-wide coverage.

Deliverable: `docs/proposals/<agency>.md` and a slide deck for each meeting.

4 Open questions for Steve

1. What does the SBA work produce today, and can it be added here?
2. Who is the first audience: a specific agency leader, an IG, OMB, or the task force?
3. Is any non-public data access expected for the pilots?
4. Is there a deadline or meeting the first output has to be ready for?
